Into the Breach: Computer and Network Vulnerabilities

BY ANTHONY KASZA, Security Analyst

With the ever increasing incidents of high profile security related breaches, private companies and government agencies have been urgently seeking students and professionals with the skills and knowledge required to protect valuable assets.

To demonstrate how sound judgment can improve the security of any organization, security analyst Anthony Kasza will speak about the ethical utilization of various tools available to a security professional. He will also give an overview of different vulnerability scanning programs, types of attacks, and tips on how to protect your own environment.

Space is limited!

If you are planning to attend, please RSVP to deltaupe@cdm.depaul.edu by Sunday, February 19th to reserve your spot.
